Viewer ..... 1

## Viewer

The Viewer addon allows the user to open pictures and videos directly from the cluster.

The supported file formats are :

- images : jpeg, bmp, gif, png, svg ...
- videos : mp4, ogv, webm, h264

Initially all the users in the Public team can use the addon but of course they can only open files for which they have read Unix access rights on the system where the file is located. This teams and members that can access the viewer can be modified by the administrator.
